

# Newton's 2nd Law Practice

1)    
 a) Find  $a$    
 b) if  $\mu = .15$ , find  $a$

2)    
 $\mu = .1$ , Find  $a$

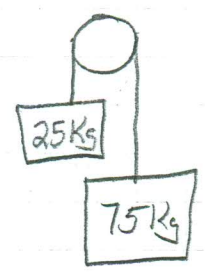

3)    
 a) Find  $a$    
 b) if  $\mu = .1$ , find  $a$

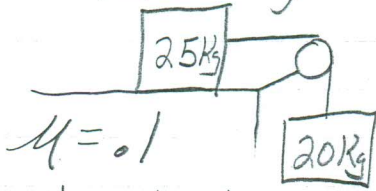

4)    
 a) Find  $a$    
 b) if  $\mu = .15$ , find  $a$

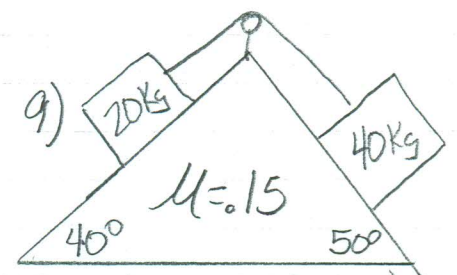

5)    
 Find  $\mu$

6) A 25kg box is being pulled up a 35-degree incline with a constant speed. If  $\mu = .1$ , Find  $T$  in the rope

\* Find  $T$  &  $A$  for the following

7) 

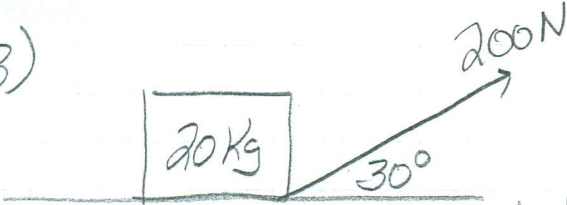

8)    
 $\mu = .1$    
 With and w/o Friction

9)    
 with & w/o Friction

10) What is the apparent weight of a person in an elevator if it accelerates up at  $1.5 \text{ m/s}^2$  and down  $1.5 \text{ m/s}^2$  and the person's mass is  $80 \text{ kg}$ .

11) A person accelerates a box upward by a rope with a tension of  $200 \text{ Newtons}$ . The mass of the box is  $10 \text{ kg}$ , Find  $a$ .

12) The coefficient between a car tire and the road is  $0.75$ . If the car is travelling at  $25 \text{ m/s}$ , what distance is required to stop it.

13)   
If the speed is constant, Find  $\mu$

If the box starts from rest, what is the final velocity? If  $\mu = 0.15$ , what is the final velocity?

15) The maximum force a rope can withstand is  $500 \text{ Newtons}$ . Unfortunately a thief wanting to use it weighs  $588 \text{ Newtons}$ . What must he accelerate downward for it not to break?

16) What is the tension in a rope if a  $600 \text{ Newton}$  individual climbs up it with a constant speed?
